

AnnaCare

The sensor that thinks ahead
– for real relief in the team.

Precision instead of alarm fatigue:
Detects fall and wandering risks based on need, delivers exclusively relevant alerts
– for focused care.

You know the challenge:

"Especially at night, falls often go unnoticed or residents have fallen so badly that they couldn't call for help."

- Nursing Service Manager Roggenkamp, Ev. Senior Center Vohwinkel

Your key advantages with AnnaCare:

Intelligent Early Detection:

Detects attempts to get up before the bed is left.

Precise & Relevant Alarms:

Minimizes unnecessary disruptions, enables focused care.

Simple & Compatible:

Seamless integration into any call system, easy placement, hygienic.

More Safety & Dignity:

Reliable protection against fall & wandering, without cameras, without radiation.

How AnnaCare works: Precise, needs-based, effective

The discreet, A4-sized sensor pad is placed unobtrusively under a bed castor or bed leg. Highly sensitive vibration sensors detect relevant movements. Our AI-based software analyzes the data in real-time and acts based on need:

- **Get-up Detection:** Reliable notification when a resident gets up or leaves the bed.
- **Intelligent Early Detection (NEW):** Identifies typical patterns **before** actually getting up – for proactive action and fall prevention.
- **Restlessness Detection (NEW):** Documents activity patterns (via dashboard) and can indicate increased risks.
- **Flexible Settings:** Adjustable delay (e.g., for toilet breaks) and individual monitoring times ensure only relevant alerts instead of alarm fatigue.
- **Hygienic & Low-Maintenance:** easy to clean, durable, and maintenance-free.
- **Mobile Use:** Also works under chairs, for more safety in living areas.

From Practice: Nursing Service Managers Report

"With the system, we can now act very quickly [...] The feedback from the nursing staff was that they feel safer – they always have an eye on the situation, so to speak. [...] I would recommend it 1000%."

- NSM Seuthe,  **doreaFAMILIE** Gevelsberg

"Yes, I would recommend it [...] It is [...] also mobile. You could even take it into the living area to place it under a chair, for example [...] no installation that you have to laboriously uninstall [...] you can also just take it with you. I like that."

- NSM Roggenkamp,
